

Rajendra Hegadkar

+91 9284106151 | hegadkarraj@gmail.com | Pune, Maharashtra

Professional Summary

System Engineer with 3+ years of experience in IT infrastructure, system administration, enterprise support, networking, and security. Hands-on experience with Windows Server, Active Directory, Group Policy, Linux/Ubuntu, Apache, Nginx, SSH, RDP, Sophos Firewall, Trend Micro Endpoint Security, Trend Micro ZTNA, DNS, Cloudflare, and Cloudflare Tunnel. Experienced in designing self-hosted infrastructure, implementing secure remote-access solutions, deploying open-source applications, and developing AWS infrastructure prototypes using EC2, VPC, Route 53, Load Balancer, and IAM. Strong focus on infrastructure reliability, security, troubleshooting, automation, and cost optimization.

Technical Skills

- **Operating Systems:** Linux, Ubuntu, Windows Server, Windows Desktop
- **Windows Infrastructure:** Active Directory, Group Policy, Remote Desktop (RDP), Windows Server Administration
- **Linux & Web Infrastructure:** Linux Server Administration, Apache, Nginx, Reverse Proxy, SSH
- **Cloud & AWS:** Amazon EC2, VPC, Route 53, Load Balancer, IAM, Cloud Networking
- **Networking:** TCP/IP, DNS, VPN, Routing, Firewall Configuration, Network Troubleshooting
- **Firewall & Network Security:** Sophos Firewall Administration, Firewall Policies, Web Filtering, Network Security, DNS Protection
- **Endpoint & Zero Trust Security:** Trend Micro Endpoint Security, Trend Micro ZTNA, Endpoint Security Policies, Access Control
- **DNS & Secure Access:** DNS Protocol, DNS Configuration, Sophos DNS Protection, Cloudflare, Cloudflare Tunnel, SSL/TLS
- **Containers & Virtualization:** Docker, Virtualization, Server Provisioning
- **Microsoft 365:** Office 365 Administration
- **IT Operations:** IT Asset Management & Procurement, Hardware & Software Troubleshooting
- **Support:** 2nd/3rd-level Technical Support for Servers, Networks, Applications, and Infrastructure
- **Tools & Documentation:** Git, Infrastructure Documentation, Incident Management, Configuration Documentation

Professional Experience

Senior System Executive

2023 – Present

nCircletech Pvt Ltd.

- Managed the full IT asset lifecycle including procurement, inventory, deployment, maintenance, warranty coordination, and decommissioning.
- Administered Windows systems and Active Directory, troubleshooting operating system, user access, authentication, and domain-related issues with minimal user downtime.
- Developed and managed Group Policies to enforce configuration consistency, security policies, and standardized endpoint configurations.
- Administered Sophos Firewall infrastructure including firewall policies, network security rules, web filtering, traffic management, and security configuration.
- Implemented and maintained Sophos DNS Protection to provide DNS-layer security, policy enforcement, and protection against malicious or unauthorized domain access.
- Managed Trend Micro Endpoint Security policies to protect enterprise endpoints and maintain endpoint security and compliance across the infrastructure.
- Worked with Trend Micro Zero Trust Network Access (ZTNA) to provide controlled access to internal applications and resources based on identity and access policies.
- Configured and troubleshoot DNS services and records, with practical understanding of DNS resolution, domain records, and DNS-based service connectivity.
- Designed and implemented firewall rules and network security controls to secure network communication across departments.
- Maintained Microsoft Office 365 environment and supported users with access, configuration, and collaboration tools.
- Enforced endpoint security policies and conducted regular system audits to improve infrastructure security and compliance.
- Collaborated with cross-functional teams to deploy IT infrastructure for new projects and business requirements.
- Provided 2nd/3rd-level technical support for servers, networks, applications, endpoints, and infrastructure-related

issues.

- Performed network and security troubleshooting across firewalls, DNS, VPN, endpoint security, Windows servers, Linux systems, and user endpoints.
- Documented infrastructure configurations, incidents, troubleshooting procedures, and technical solutions for knowledge sharing and operational continuity.

System Engineer

2022 – 2023

VDA Infosolutions Pvt. Ltd.

- Managed IT hardware assets from acquisition through deployment and disposal, including diagnosis, warranty tracking, vendor coordination, and asset records.
- Maintained accurate support call logs and warranty records to streamline hardware maintenance and vendor operations.
- Followed ITIL-based support processes and tracked incidents and service requests using ServiceNow.
- Provided technical support to end-users, resolving hardware, software, operating system, and connectivity issues with minimal escalation.
- Coordinated with internal IT teams and external vendors to diagnose and resolve infrastructure and technical issues.

Projects Undertaken

Self-Hosted Remote Access Gateway

Linux | Apache | Cloudflare

- Designed and deployed a self-hosted remote access gateway on a Linux/Ubuntu server to provide centralized remote access to internal Windows Remote Desktop (RDP) and Linux SSH services.
- Configured Apache as a reverse proxy to route requests to internal backend services while maintaining centralized control over remote connectivity.
- Implemented Cloudflare Tunnel to securely expose selected internal services without directly publishing the internal server or opening inbound firewall ports to the Internet.
- Configured DNS, Cloudflare Tunnel routing, Apache virtual hosts, reverse proxy rules, and SSL/TLS settings to establish reliable connectivity between external users and internal infrastructure.
- Applied firewall and access-control policies to limit service exposure and reduce the attack surface of internally hosted systems.
- Troubleshot DNS, proxy, tunnel, authentication, SSH, RDP, and Linux service-level issues across the complete remote-access stack.
- Centralized remote administration of multiple internal systems through a controlled gateway architecture, improving manageability and reducing dependency on separate remote-access solutions.

AWS Infrastructure & Hybrid Connectivity Prototype

AWS | Cloudflare | Linux

- Designed and implemented an AWS infrastructure prototype to gain hands-on experience with cloud networking, compute, DNS, load balancing, identity management, and hybrid connectivity concepts.
- Created an AWS Virtual Private Cloud (VPC) with subnets, routing, and security controls to establish an isolated cloud network environment for hosting infrastructure services.
- Provisioned and configured Amazon EC2 instances for Linux-based server workloads and performed system administration, connectivity testing, and service configuration.
- Configured AWS IAM users, roles, and permissions following the principle of least privilege to control access to cloud resources.
- Configured Amazon Route 53 for DNS management and domain-to-service resolution within the cloud infrastructure architecture.
- Configured an AWS Load Balancer to distribute application traffic across available backend resources and explored scalable application architecture.
- Connected locally hosted Linux infrastructure with the AWS environment using Cloudflare Tunnel, enabling controlled communication between on-premises resources and cloud-hosted services.
- Applied security concepts including network segmentation, security groups, controlled access, DNS configuration, SSL/TLS, and restricted service exposure across local and cloud environments.
- Troubleshot connectivity, DNS resolution, routing, IAM permissions, load-balancing, and service-access issues across the hybrid infrastructure environment.

Independent IT Infrastructure Development & Cost Optimization

Linux | Open Source | Networking

- Designed and implemented IT infrastructure solutions based on business requirements with emphasis on security, reliability, scalability, maintainability, and cost optimization.
- Evaluated open-source and self-hosted alternatives to commercial solutions to reduce recurring licensing and subscription costs while meeting operational requirements.
- Provisioned and configured Linux servers, networking services, applications, Docker containers, and supporting infrastructure according to project requirements.
- Analyzed infrastructure requirements and selected appropriate hardware, software, virtualization, and deployment

approaches to optimize resource utilization and operational expenditure.

- Implemented practical infrastructure solutions using open-source technologies while maintaining appropriate access controls, firewall policies, and operational reliability.
- Managed system configuration, troubleshooting, updates, monitoring, and ongoing maintenance to ensure service availability and business continuity.

Self-Hosted Open-Source Web Application

Linux | Docker | Web Infrastructure

- Deployed and hosted an open-source web application on a Linux server for internal day-to-day organizational use.
- Configured the Linux environment, application dependencies, web services, networking, and access controls required for reliable internal application delivery.
- Used Docker-based deployment where applicable to simplify application provisioning, dependency management, service isolation, and maintenance.
- Managed application configuration, user access, service availability, updates, troubleshooting, and routine maintenance.
- Implemented a self-hosted solution to meet internal operational requirements while reducing dependency on external SaaS platforms and recurring subscription costs.
- Performed application and server-level troubleshooting to resolve connectivity, configuration, dependency, and service-related issues.

Education

Master of Computer Applications (MCA)

2022 – 2024

Pune University

Bachelor of Science – Computer Science

2019 – 2022

Pune University

Certifications

- **CCNA** – Cisco Certified Network Associate (Sysap Technologies)
- **CEH** – Certified Ethical Hacker (Sysap Technologies)
- **Microsoft Azure Fundamentals** – Preparing
